# ACTUATOR

# ACTUATOR

NB's BG type is a compact single axis actuator which integrates a slide guide and precision ball screw. BG type offers compact dimensions and outperforms conventional positioning tables.

This is made possible by a unique "U" shaped guide rail and slide block which provides multiple functions of a guide block and a ball screw nut combined into a single unit. The "U" shaped guide rail offers high rigidity against bending moment. This structural feature allows for integrated framework of machinery or equipment and can be cantilevered. Additionally, the slide block contains 4 ball circuits which delivers high load capacity, high accuracy and high rigidity.

Figure H-1 Structure of BG type

## ADVANTAGES

### Adjustment Free

The integration of the slide guide and precision ball screw eliminates complex precision adjustment and reduces installation time dramatically.

### High Rigidity

"U" shaped guide rail provides very high rigidity despite its compact configuration and can be used for cantilevered application. (refer to page H-9)

### High Accuracy

BG type contains four ball circuits and four-point contact ball grooves which contribute to its high rigidity. The combination of precision ground guide rail, slide block and precision ball screw provides high positioning accuracy.

### Space Saving

In comparison to conventional positioning tables, the BG type allows for compact designs and dramatic space saving. The "U" shaped guide rail and integrated slide block and precision ball screw make this possible.

Figure H-2 Ball Contact Profile

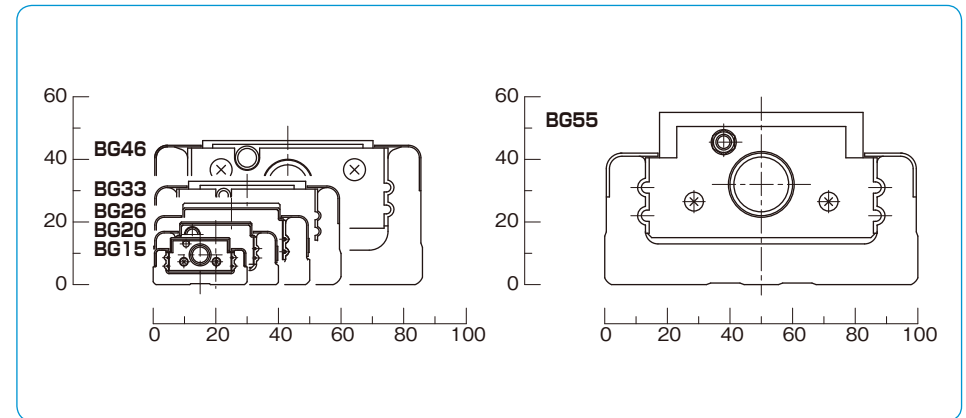

Figure H-3 Cross Section

PART NUMBER STRUCTURE

Part number for BG type is described as follows.

① BG type  
 BG 15 01 A / 02 B

② size  
 75 H / 100 P / 125 / 150 / 175 / 200

③ ball screw lead  
 A0 / A1 C / A2 J / A3 J / A4 / A5 / A6 / A7 / A8 / A9 / AA / RO

④ type of block  
 A 1 long block  
 B 2 long blocks  
 C 1 short block  
 D 2 short blocks

⑤ guide rail length  
 100 H / 150 P / 200

⑥ accuracy grade  
 H high grade  
 P precision grade

⑦ motor bracket (refer to page H-17~)  
 The number in the square, □, after suffix RA, RB or RC indicates the mounting direction code. (refer to page H-32, H-33)

⑧ cover and bellows  
 none without top cover  
 C with top cover + sub table  
 J○○ with bellows

⑨ sensor  
 none without sensor  
 S with slim-type / compact photomicro sensor  
 H with close contact capable photomicro sensor  
 K with proximity sensor

⑩ option  
 none without option  
 P△□ with positioning pin hole (※1)  
 G▲ with special grease option (※2)  
 LB with low temperature black chrome treatment (※3)  
 PNP with PNP sensor

In case of multiple options, add + between each option.  
 Example: (PS+LB+PNP)  
 ※1: △ is S, W or R (refer to page H-57)  
 □ is R (refer to page H-57)  
 ※2: ▲ is K, U, L or F (refer to page H-16)  
 Grease is applied to slide guide, ball screw, and angular bearings.  
 ※3: LB is applied to steel parts except for aluminum parts and radial bearings.  
 For BG15, LB is applied to steel parts except for the drive block, aluminum parts, and radial bearings.  
 Black chrome treatment is applied to the drive block.

SPECIFICATIONS

BG Type is categorized as either high grade (H) or precision grade (P).

M<sub>2P</sub>, M<sub>2V</sub> and M<sub>2R</sub> are the allowable static moments when 2 blocks are used in close contact.  
 ※ Please consult with NB when using BG15, BG20 and BG26 series in the Precision grade with short and frequent stroke. (short stroke: BG1501= 2mm or less, BG1502= 4mm or less, BG2001 = 7mm or less, BG2005 = 25mm or less, BG2602 = 14mm or less and BG2605 = 25mm or less)  
 Short blocks are not available for BG3320.

Figure H-4 Direction of Moment

ALLOWABLE SPEED

Allowable speed of BG type is subject to the type of motor and operating conditions. The speed may also be limited by the critical speed of the ball screw. Use caution when operating at high speeds or using long rails.

Table H-2 Allowable Speed

**RIGIDITY**

By utilizing four-circuit and four-point contact structure, the BG type provides extremely high rigidity. Figure H-6 shows displacement of each size of long block against radial load. Table H-6 shows the geometrical moment of inertia of guide rails.

Figure H-6 Block Displacement against Radial Load

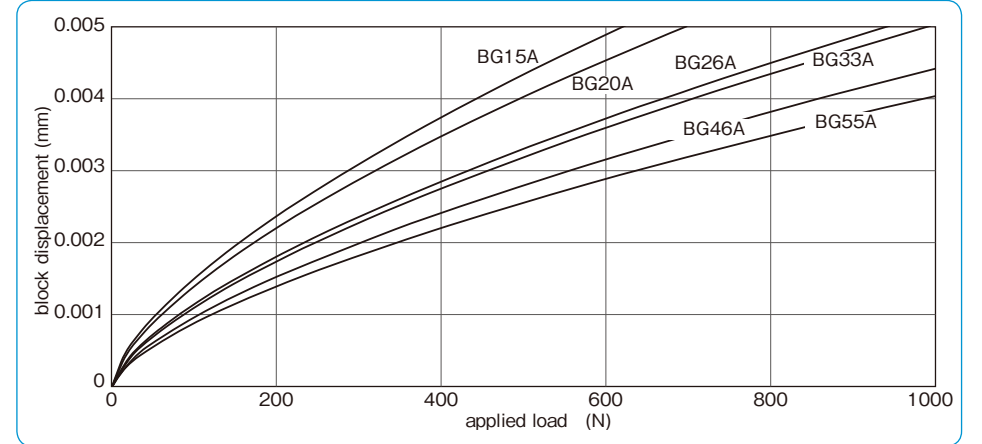

Table H-6 Geometrical Moment of Inertia of Guide Rail

part number	geometrical moment of inertia (mm <sup>4</sup> )	mass W (kg/100mm)
<b>BG15</b>	1.22 × 10 <sup>3</sup>	0.12

Above values are measured by using our selected motors.  
 ※ Above specifications are based on using NB standard grease. Other grease may cause deviations.  
 The values in the parentheses are positioning repeatability when used with return pulley unit.

Positioning Repeatability

After setting an arbitrary position, from one end, move the drive block to this position and measure the stop position. Repeat the positioning and measurement process 7 times with respect to the setting position at the midpoint and near both ends of travel. Take the maximum difference and divide it by 2, then indicate it with a positive and negative sign as the test result.

Positioning Repeatability

$$= \pm \frac{1}{2} ((\text{maximum value of } \ell_n) - (\text{minimum value of } \ell_n))$$

Figure H-7 Positioning Repeatability

Positioning Accuracy

Positioning is performed in one direction and the resulting position is set as the datum point. Take the difference between the actual travel distance and the commanded travel distance from the datum point. Continuing in the same direction (without returning to the start point) repeat this process randomly several times until nearing to the stroke limit. Express the accuracy by the absolute maximum difference.

$$\text{Positioning Accuracy} = (\Delta \ell_n)_{\text{max}}$$

Figure H-8 Positioning Accuracy

Running Parallelism B

After fixing the guide rail onto the surface plate, placing the dial test indicator on the center of the slide block and connecting the indicator probe onto the mounting surface, run the block over the entire travel distance. Take the maximum deviation in readings as the test result.

Figure H-9 Running Parallelism

Backlash

Using the feed screw to move the slide block a little, take the dial test indicator reading and make it the datum point. While in this position, thrust the block by a certain force in the same direction without using the feed screw. Release the thrust and read the return, then take the difference from the datum point. Repeat the same process at the midpoint and near both ends of travel. Take the maximum difference as the test result.

Figure H-10 Backlash

$$\text{Backlash} = \Delta \ell$$

RATED LIFE

To obtain the rated life of the BG type, calculate the rated life of the guide portion, ball screw portion and support bearing portion. Use the minimum value as the rated life of the BG type.

A. Life of Guide Portion

Use the following equation for calculating the rated life of guide portion.

$$L_G = \left( \frac{f_c \cdot C}{f_w \cdot P_T} \right)^3 \cdot 50 \quad \dots\dots\dots (1)$$

$L_G$ : rated life (km)  $f_c$ : contact coefficient (refer to Table H-8)  
 $f_w$ : applied load coefficient (refer to Table H-9)  
 $C$ : basic dynamic load rating (N)  
 $P_T$ : calculated load applied to one block (N)

A.1. Calculation of  $P_T$

Before calculating the rated life using the equation (1), the calculated load applied to one block ( $P_T$ ) needs to be obtained in consideration of the moment load, etc. that will be actually applied. For rapidly-accelerating or short stroke motion,  $P_T$  needs to be calculated with acceleration taken into consideration. The calculation of this acceleration will be carried out for the mass applied to BG. Obtain the calculated load during uniform motion, acceleration, and deceleration, and use the average value of the three as  $P_T$ .

For the calculation of  $P_T$ , select an appropriate equation depending on the installation conditions of the guide.

It is also possible to calculate  $P_T$  without including the effect of acceleration by using the equation " $P_T = P_{TC}$  (see the equations (2), (5), and (8)). In this case, however, the obtained value is a rough approximation, so a selection with sufficient margin is recommended.

Table H-8 Contact Coefficient ( $f_c$ )

number of blocks in close contact on one axis	contact coefficient ( $f_c$ )
1	1.0
2	0.81

Table H-9 Applied Load Coefficient ( $f_w$ )

operating conditions		applied load coefficient ( $f_w$ )
vibration, impact	velocity	
none	15m/min or less	1.0 ~ 1.5
low	60m/min or less	1.5 ~ 2.0
high	60m/min or more	2.0 ~ 3.5

Table H-10 Moment Equivalent Coefficient

	$E_p$ (E2p)	$E_y$ (E2y)	$E_r$ (E2r)

BG46 * * D	$2.15 \times 10^{-2}$	$1.81 \times 10^{-2}$	$1.59 \times 10^{-2}$
BG55 * * A	$6.80 \times 10^{-2}$	$5.71 \times 10^{-2}$	$2.74 \times 10^{-2}$
BG55 * * B	$1.35 \times 10^{-2}$	$1.14 \times 10^{-2}$	$1.37 \times 10^{-2}$

\*The E2 coefficient is for two blocks being used in close contact.

A.1.a.  $P_T$  for Horizontal Move (Horizontal Mounting)

i) during uniform motion ( $P_{TC}$ )

$$P_{TC} = \frac{1}{n} \cdot W + E_p \cdot M_{pL} + E_y \cdot M_{yL} + E_r \cdot M_{rL} \quad \dots\dots\dots (2)$$

ii) during acceleration ( $P_{Ta}$ )

$$P_{Ta} = \frac{1}{n} \cdot W + E_p(M_{pL} + m \cdot \alpha_a \cdot Z) + E_y(M_{yL} + m \cdot \alpha_a \cdot X) + E_r \cdot M_{rL} \quad \dots\dots\dots (3)$$

Note that the values of ( $M_{pL} + m \cdot \alpha_a \cdot Z$ ) and ( $M_{yL} + m \cdot \alpha_a \cdot X$ ) will be treated as 0 (zero) when the calculated value is negative.

iii) during deceleration ( $P_{Td}$ )

$$P_{Td} = \frac{1}{n} \cdot W + E_p(M_{pL} + m \cdot \alpha_d \cdot Z) + E_y(M_{yL} + m \cdot \alpha_d \cdot X) + E_r \cdot M_{rL} \quad \dots\dots\dots (4)$$

Note that the values of ( $M_{pL} + m \cdot \alpha_d \cdot Z$ ) and ( $M_{yL} + m \cdot \alpha_d \cdot X$ ) will be treated as 0 (zero) when the calculated value is negative.

$P_{TC}$ : calculated load applied to a block during uniform motion (N)  $P_{Ta}$ : calculated load applied to a block during accelerating (N)  
 $P_{Td}$ : calculated load applied to a block during decelerating (N)  $n$ : number of blocks of BG  $W$ : applied load (N)  $m$ : carrying mass (kg)  
 $\alpha_a$ : acceleration during accelerating (m/sec<sup>2</sup>)  $\alpha_d$ : acceleration during decelerating (m/sec<sup>2</sup>) (the negative value)  
 $X$ : distance between the center of BG and the center of the carrying mass (mm)  
 $Y$ : distance between the center of BG and the center of the carrying mass (mm)  
 $Z$ : distance between the center of BG ball screw and the center of the carrying mass (mm)  
 $E_p$ : moment equivalent coefficient in the pitching direction (refer to Table H-10)  
 $E_y$ : moment equivalent coefficient in the yawing direction (refer to Table H-10)  
 $E_r$ : moment equivalent coefficient in the rolling direction (refer to Table H-10)  
 $M_{pL}$ : applied moment in the pitching direction (N · mm)  $M_{pL} = W \cdot Y$   
 $M_{yL}$ : applied moment in the yawing direction (N · mm)  $M_{yL} = 0$   
 $M_{rL}$ : applied moment in the rolling direction (N · mm)  $M_{rL} = W \cdot X$  ※Refer to Fig.H-4 for the direction of moment.

Figure H-11

In case of load coming from different direction other than the direction shown in the drawing W(m), please contact NB.

A.1.b.  $P_T$  for Horizontal Move (Wall Mounting)

i) during uniform motion ( $P_{TC}$ )

$$P_{TC} = \frac{1}{1.19 \cdot n} \cdot W + E_p \cdot M_{pL} + E_y \cdot M_{yL} + E_r \cdot M_{rL} \quad \dots\dots\dots (5)$$

ii) during acceleration ( $P_{Ta}$ )

$$P_{Ta} = \frac{1}{1.19 \cdot n} \cdot W + E_p(M_{pL} + m \cdot \alpha_a \cdot Z) + E_y(M_{yL} + m \cdot \alpha_a \cdot X) + E_r \cdot M_{rL} \quad \dots\dots\dots (6)$$

Note that the values of ( $M_{pL} + m \cdot \alpha_a \cdot Z$ ) and ( $M_{yL} + m \cdot \alpha_a \cdot X$ ) will be treated as 0 (zero) when the calculated value is negative.

iii) during deceleration ( $P_{Td}$ )

$$P_{Td} = \frac{1}{1.19 \cdot n} \cdot W + E_p(M_{pL} + m \cdot \alpha_d \cdot Z) + E_y(M_{yL} + m \cdot \alpha_d \cdot X) + E_r \cdot M_{rL} \quad \dots\dots\dots (7)$$

Note that the values of ( $M_{pL} + m \cdot \alpha_d \cdot Z$ ) and ( $M_{yL} + m \cdot \alpha_d \cdot X$ ) will be treated as 0 (zero) when the calculated value is negative.

$P_{TC}$ : calculated load applied to a block during uniform motion (N)  $P_{Ta}$ : calculated load applied to a block during accelerating (N)  
 $P_{Td}$ : calculated load applied to a block during decelerating (N)  $n$ : number of blocks of BG  $W$ : applied load (N)  $m$ : carrying mass (kg)  
 $\alpha_a$ : acceleration during accelerating (m/sec<sup>2</sup>)  $\alpha_d$ : acceleration during decelerating (m/sec<sup>2</sup>) (the negative value)  
 $X$ : distance between the center of BG and the center of the carrying mass (mm)  
 $Y$ : distance between the center of BG and the center of the carrying mass (mm)  
 $Z$ : distance between the center of BG ball screw and the center of the carrying mass (mm)  
 $E_p$ : moment equivalent coefficient in the pitching direction (refer to Table H-10)  $E_y$ : moment equivalent coefficient in the yawing direction (refer to Table H-10)  $E_r$ : moment equivalent coefficient in the rolling direction (refer to Table H-10)  
 $M_{pL}$ : applied moment in the pitching direction (N · mm)  $M_{pL} = 0$   
 $M_{yL}$ : applied moment in the yawing direction (N · mm)  $M_{yL} = W \cdot Y$   
 $M_{rL}$ : applied moment in the rolling direction (N · mm)  $M_{rL} = W \cdot Z$  ※Refer to Fig. H-4 for the direction of moment.

Figure H-12

In case of load coming from different direction other than the direction shown in the drawing W(m), please contact NB.

**A.1.c. P<sub>T</sub> for Vertical Move**

i) during uniform motion (P<sub>TC</sub>)

$$P_{TC} = E_p \cdot M_{pL} + E_y \cdot M_{yL} + E_r \cdot M_{rL} \dots\dots\dots (8)$$

ii) during acceleration (P<sub>TA</sub>)

$$P_{TA} = E_p(M_{pL} + m \cdot a_a \cdot Z) + E_y(M_{yL} + m \cdot a_a \cdot X) + E_r \cdot M_{rL} \dots\dots\dots (9)$$

Note that the values of (M<sub>pL</sub>+m·a<sub>a</sub>·Z) and (M<sub>yL</sub>+m·a<sub>a</sub>·X) will be treated as 0 (zero) when the calculated value is negative.

iii) during deceleration (P<sub>TD</sub>)

$$P_{TD} = E_p(M_{pL} + m \cdot a_d \cdot Z) + E_y(M_{yL} + m \cdot a_d \cdot X) + E_r \cdot M_{rL} \dots\dots\dots (10)$$

Note that the values of (M<sub>pL</sub>+m·a<sub>d</sub>·Z) and (M<sub>yL</sub>+m·a<sub>d</sub>·X) will be treated as 0 (zero) when the calculated value is negative.

P<sub>TC</sub>: calculated load applied to a block during uniform motion(N) P<sub>TA</sub>: calculated load applied to a block during accelerating(N)  
 P<sub>TD</sub>: calculated load applied to a block during decelerating(N) n: number of blocks of BG W: applied load(N) m: carrying mass(kg)  
 a<sub>a</sub>: acceleration during accelerating(m/sec<sup>2</sup>) a<sub>d</sub>: acceleration during decelerating(m/sec<sup>2</sup>) (the negative value)  
 X: distance between the center of BG and the center of the carrying mass(mm)  
 Y: distance between the center of BG and the center of the carrying mass(mm)  
 Z: distance between the center of BG ball screw and the center of the carrying mass(mm)  
 E<sub>p</sub>: moment equivalent coefficient in the pitching direction (refer to Table H-10)  
 E<sub>y</sub>: moment equivalent coefficient in the yawing direction (refer to Table H-10)  
 E<sub>r</sub>: moment equivalent coefficient in the rolling direction (refer to Table H-10)  
 M<sub>pL</sub>: applied moment in the pitching direction (N·mm) M<sub>rL</sub>=W·Z M<sub>yL</sub>: loaded moment in the yawing direction (N·mm) M<sub>yL</sub>=W·X  
 M<sub>rL</sub>: applied moment in the rolling direction (N·mm) M<sub>rL</sub>=0 ※Refer to Fig. H-4 for the direction of moment.

Figure H-13

**A.1.d.**

Obtain the calculated load applied to a block (P<sub>T</sub>) by calculating the average load of each motion using an appropriate equation among those shown above according to the application.

$$P_T = \sqrt[3]{\frac{1}{S_1+S_2+S_3} (P_{TA}^3 \cdot S_1 + P_{TC}^3 \cdot S_2 + P_{TD}^3 \cdot S_3)} \dots\dots\dots (11)$$

P<sub>T</sub>: calculated load applied to one block (N)  
 S<sub>1</sub>: travel distance during acceleration (mm) (refer to Figure H-14)  
 S<sub>2</sub>: travel distance during uniform motion (mm) (refer to Figure H-14)  
 S<sub>3</sub>: travel distance during deceleration (mm) (refer to Figure H-14)  
 P<sub>TA</sub>: calculated load applied to one block during accelerating (N): equation (3), (6), and (9)  
 P<sub>TC</sub>: calculated load applied to one block during uniform motion (N): equation (2), (5), and (8)  
 P<sub>TD</sub>: calculated load applied to one block during decelerating (N): equation (4), (7), and (10)

Figure H-14

**B. Life of Ball Screw and Support Bearing**

The life of ball screw and support bearing can be calculated using a common equation, as shown below. Compare the dynamic load rating of the ball screw and the support bearing and apply smaller value for calculation.

$$L_a = \left( \frac{1}{f_w} \cdot \frac{C_a \text{ or } C_b}{P_a} \right)^3 \cdot \ell \dots\dots\dots (12)$$

L<sub>a</sub>: rated life (km) f<sub>w</sub>: applied load coefficient (refer to Table H-9)  
 C<sub>a</sub>: basic dynamic load rating of the ball screw (N)  
 C<sub>b</sub>: basic dynamic load rating of the support bearing (N)  
 P<sub>a</sub>: axial load (N) ℓ: ball screw lead (mm)

**B.1. Calculation of Pa**

Before calculating the life using the equation (12), calculate P<sub>a</sub> with acceleration taken into consideration. Calculate the load in each axial direction during uniform motion, acceleration, and deceleration and the obtained value is used as P<sub>a</sub>.

**B.1.a. For Horizontal Move**

i) during uniform motion (P<sub>ac</sub>)

$$P_{ac} = \mu \cdot W + F + f_b \cdot n \dots\dots\dots (13)$$

ii) during acceleration (P<sub>aa</sub>)

$$P_{aa} = \mu \cdot W + F + f_b \cdot n + (m + m_b \cdot n) a_a \dots\dots\dots (14)$$

iii) during deceleration (P<sub>ad</sub>)

$$P_{ad} = \mu \cdot W + F + f_b \cdot n + (m + m_b \cdot n) a_d \dots\dots\dots (15)$$

**B.1.b. For Vertical Move**

i) during uniform motion (P<sub>ac</sub>)

$$P_{ac} = (m + m_b \cdot n)g + F + f_b \cdot n \dots\dots\dots (16)$$

ii) during acceleration (P<sub>aa</sub>)

$$P_{aa} = (m + m_b \cdot n) \cdot (g + a_a) + F + f_b \cdot n_a \dots\dots\dots (17)$$

iii) during deceleration (P<sub>ad</sub>)

$$P_{ad} = (m + m_b \cdot n) \cdot (g + a_d) + F + f_b \cdot n_d \dots\dots\dots (18)$$

**B.1.c.**

Obtain the average axial load (P<sub>a</sub>) using an appropriate formula among those shown above depending on the application.

$$P_a = \sqrt[3]{\frac{1}{S_1+S_2+S_3} (P_{aa}^3 \cdot S_1 + P_{ac}^3 \cdot S_2 + P_{ad}^3 \cdot S_3)} \dots\dots\dots (19)$$

P<sub>a</sub>: average axial load (N)  
 S<sub>1</sub>: travel distance during acceleration (mm) (refer to Table H-14)  
 S<sub>2</sub>: travel distance during uniform motion (mm) (refer to Table H-14)  
 S<sub>3</sub>: travel distance during deceleration (mm) (refer to Table H-14)  
 P<sub>aa</sub>: axial load during accelerating (N): formulas (14) and (17)  
 P<sub>ac</sub>: axial load during uniform motion (N): formulas (13) and (16)  
 P<sub>ad</sub>: axial load during decelerating (N): formulas (15) and (18)

Table H-11 Sliding Resistance (f<sub>b</sub>) of a Single Block (Seal Resistance) unit: N

	high grade (H)	precision grade (P)
BG15	0.8	1.8
BG20	2.3	4.9
BG26	5.4	9.8
BG33	4.4	10.2
BG46	7.4	13.3
BG55	9	16

P<sub>ac</sub>: axial load rating during uniform motion (N)  
 P<sub>aa</sub>: axial load rating during accelerating (N)  
 P<sub>ad</sub>: axial load rating during decelerating (N)  
 μ: friction coefficient W: load applied to a block (N)  
 F: external force (load) applied to the axial direction (N)  
 f<sub>b</sub>: sliding resistance of a single block (N) (refer to Table H-11)  
 n: number of blocks of BG m: carrying mass (kg)  
 m<sub>b</sub>: mass of a block of BG (kg) (refer to Table H-4)  
 a<sub>a</sub>: acceleration during accelerating (m/s<sup>2</sup>)  
 a<sub>d</sub>: acceleration during decelerating (m/s<sup>2</sup>)  
 g: acceleration of gravity

LUBRICATION

- BG type contains a lithium soap based grease. (Multemp PS No.2, KYODO YUSHI) Apply similar type of grease for the lubrication as required depending on the operating conditions.
- Use the grease fitting to lubricate the slide block. For ball screw portion apply grease directly to the surface of screw shaft.
- ※ BG15 slide block has  $\phi 2\text{mm}$  oil holes instead of grease fitting.
- Unless otherwise instructed, a grease fitting is located as shown in Figure H-15.
- The grease can be changed to a high function type by adding a special grease option at the end of the part number. Please refer to Table H-12 for the grease type. Also refer to page Eng-39 for further details.

Table H-12 Applicable Grease

grease option	features	product name
none (standard)	—	Multemp PS No.2 (KYODO YUSHI)
GK	urea-type low dust generation grease	K Grease
GU	urea-type low dust generation grease; low sliding resistance	KGU Grease
GL	lithium-type low dust generation grease	KGL Grease
GF	urea-type anti-fretting grease	KGF Grease

Figure H-15 Location of Grease Fitting

OPERATING TEMPERATURE

- Resin parts are incorporated in the BG type. Please avoid using BG type above 80°C. Please use the product at 55°C or lower when sensor/bellows are optioned.

USE AND HANDLING PRECAUTIONS

- Please handle as a precision component and avoid excessive vibration or shock.
- Rough handling will affect the smooth motion and reduce the precision performance and life time.
- DO NOT DISASSEMBLE. The accuracy of BG type is preadjusted when assembled.
- Please allow for extra stroke length. If the guide block repeatedly collides with damper, it may cause damage.
- Depending upon the operating environment, dust and debris may contaminate BG type and disrupt the ball circulation and precision performance.

MOTOR BRACKET CONFIGURATIONS & APPLICABLE MOTORS

NB provides optional motor brackets to easily install most popular motors.

# EXPOSED BRACKET R0

The ball screw shaft end is exposed with the exposed bracket R0 type.  
Please fabricate an original bracket in case the standard brackets are not applicable.

## BG15 Exposed Bracket R0

1. Applicable with cover and with sensors.
2. Mass is 0.04kg less than the mass in Table H-3 on page H-7.

## BG20 Exposed Bracket R0

1. Applicable with cover and with sensors.
2. Mass is 0.04kg less than the mass in Table H-3 on page H-7.

**BG26 Exposed Bracket R0**

1. Applicable with cover and with sensors.
2. Mass is 0.08kg less than the mass in Table H-3 on page H-7.

**BG46 Exposed Bracket R0**

1. Applicable with cover and with sensors.
2. Mass is 0.3kg less than the mass in Table H-3 on page H-7.

**BG33 Exposed Bracket R0**

1. Applicable with cover and with sensors.
2. Mass is 0.1kg less than the mass in Table H-3 on page H-7.

**BG55 Exposed Bracket R0**

1. Applicable with cover and with sensors.
2. Mass is 0.3kg less than the mass in Table H-3 on page H-7.

RETURN PULLEY UNIT

Return pulley units in which a motor is connected with a timing belt are available for BG type. Its return structure allows the reduction of total length (available for BG33 and BG46).

BG33 Return Pulley Unit

- 1.This drawing shows RA for MSMA01(Panasonic).
- 2.Installation position of Pulley Unit can be selected at 90° intervals (mounting direction code).
- 3.Applicable with cover and with sensors.
- 4.Tension plate can be built in and is not exposed. (not applicable to RC)
- 5.Mass is added 0.2kg to the mass in Table H-3, page H-7.
- 6.Inertia is added  $2.22 \times 10^{-6} \text{kg} \cdot \text{m}^2$  to the value of Table H-5, page H-8. (motor inertia not included)
- 7.Part number structure BG33\*\*\*-\*\*\*\*/☆☆□

SENSOR

Photomicro sensor or proximity sensor can be attached to the BG actuator with our optional sensor-mounting rail (the same length as the guide rail length). Tapped holes are machined on both sides of the guide rail, allowing attachment of sensor to either side. Standard positioning (without special instruction from customer) would be to the left of the motor mount end. Sensor option includes the items that are listed below.

PNP Sensor

For the BG type sensors can be changed to the PNP type by adding a sensor option code "PNP" at the end of the part number.

Refer to Table H-16 for the model number of PNP type sensors.

Table H-16 Sensor Type

sensor code	sensor type	applicable model type	standard specification	PNP specification model type
S	slim-type photomicro sensor	BG33, BG46, BG55	EE-SX674	EE-SX674P
	compact photomicro sensor	BG20, BG26	PM-L24	PM-L24P
H	close contact capable photomicro sensor	BG33, BG46, BG55	EE-SX671	EE-SX671P
K	proximity sensor	all model types	APM-D3B1	APM-D3E1
	proximity sensor (different frequency type)	all model types	APM-D3B1F	APM-D3E1F

SENSOR SPECIFICATIONS

slim-type, close contact capable photomicro sensor (symbol: S,H)/ OMRON CORPORATION

type	NPN TYPE	EE-SX674	EE-SX671
	PNP TYPE	EE-SX674P	EE-SX671P
sensing distance	5mm (slot width)		
standard sensing object	opaque: 2×0.8mm min.		
differential travel	0.025mm		
power supply voltage	5 to 24 VDC ±10% , ripple(P-P): 10% max.		
current consumption	35mA max. (NPN), 30 mA max.(PNP)		
control output	NPN TYPE	NPN open collector output models: At 5 to 24 VDC: 100-mA load current (Ic) with a residual voltage of 0.8V max.40-mA load current (Ic) with a residual voltage of 0.4V max.	
	PNP TYPE	PNP open collector output models: At 5 to 24 VDC: 50-mA load current (Ic) with a residual voltage of 1.3V max.	
output operation	Dark-On (+, L terminal open-circuit), Light-On (+, L terminal short-circuit)		
response frequency	1kHz max. (3kHz average)		
operation indicator	operation indicator (red) lit with incident		
ambient illumination (on receiver lens)	fluorescent light: 1000 lx max.		
ambient temperature	operating: -25 to 55°C storage: -30 to 80°C		
ambient humidity	operating: 5 to 85% RH storage: 5 to 95% RH		
vibration resistance	destruction: 20 to 2000Hz, (with a peak acceleration of 100m/s <sup>2</sup> ) 1.5mm double amplitude for 2hrs (with 4-minute cycles) each in X,Y, and Z directions		
shock resistance	destruction: 500m/s <sup>2</sup> for 3 times each in X,Y, and Z directions		
degree of protection	IEC60529 IP50		
connection method	connector type (direct soldering possible)		
weight	approx. 3g		
material	case	Polybutylene phthalate (PBT)	
	cover	Polycarbonate (PC)	
	emitter/receiver	Polycarbonate (PC)

Please read the specifications and precautions of the manufacturer's catalog.

compact photomicro sensor (symbol: S)/ SUNX LIMITED

type	NPN TYPE	PM-L24
	PNP TYPE	PM-L24P
sensing range	5mm (fixed)	
minimum sensing object	0.8×1.8mm min. opaque	
hysteresis	0.05mm or less	
repeatability	0.03mm or less	
supply voltage	5 to 24 VDC ±10% , ripple(P-P) 10% or less	
current consumption	15mA or less	
output	NPN TYPE	NPN open-collector transistor maximum sink current: 50mA, applied voltage: 30VDC or less (between output and 0V) residual voltage: 0.7V or less (at 50mA sink current) 0.4V or less (at 16mA sink current)
	PNP TYPE	PNP open-collector transistor maximum source current: 50mA, applied voltage: 30VDC or less (between output and +V) residual voltage: 0.7V or less (at 50mA sink current) 0.4V or less (at 16mA sink current)
output operation	Incorporated with 2 outputs: Light-ON/Dark-ON	
response time	under light received condition: 20μs or less under light interrupted condition: 100μs or less (response frequency: 1kHz or more)	
operation indicator	vermilion LED (lights up under light received condition)	
ambient illuminance	fluorescent light: 1000lx at the light-receiving face	
ambient temperature	operating: -25 to 55°C (No dew condensation or icing allowed.) storage: -30 to 80°C	
ambient humidity	35 to 85% RH storage: 35 to 85% RH	
voltage withstandability	1000V AC for one min. between all supply terminals connected together and enclosure	
insulation resistance	50MΩ, or more, with 250V DC megger between all supply terminals connected together and enclosure	
vibration resistance	10 to 2,000Hz frequency, 1.5mm amplitude in X, Y, and Z directions for two hours each	
shock resistance	15,000m/s <sup>2</sup> acceleration (1,500 G approx.) in X, Y, and Z directions for three times each	
cable	0.09mm <sup>2</sup> 4-core cabtyre cable 1m long	
weight	approx. 10g	
material	case	Polybutylene phthalate (PBT)
	cover	Polycarbonate

BELLOWS

BG type can be specified with a cover or bellows for dust prevention. Bellows are securely fixed for various installation methods in positioning and directions. Sensor for bellows is limited to K (proximity sensor) type only, which is pre-installed at proper positions. Please pay attention to the stroke limit of BG with bellows that is shorter than the standard stroke limit.

– Position of Sensor Cable Outlet –

The positions of the outlet for sensor cables can be selected as Figure H-16 shows.

Figure H-16 Position of Sensor Cable Outlet

part number structure for bellows

1. J (for the first symbol)
2. Specification of the position of the sensor cable outlet  
Please select the motor side or the housing side.  
M: motor side E: housing side (end plate side)
3. Specification of the position of the sensor rail  
Please select the right hand or the left hand.  
R: on the right from the motor side  
L: on the left from the motor side  
※N for BG15, 20, and 26 since the sensors are mounted on both the right and left hand.
4. JNN for without sensors
5. Sensor type is K (proximity sensor) type only (APM-D3 series: YAMATAKE CORPORATION).

– Sensor Timing Chart –

The following chart shows the standard sensor arrangement.

Figure H-17 Sensor Timing Chart

part number	A	B
<b>BG15</b>	5	8
<b>BG20</b>	5	8
<b>BG26</b>	5	13
<b>BG33</b>	10	13

## POSITIONING PIN HOLE

For the BG type, positioning pin holes can be provided on the slide block and sub table by adding the option code "PS" or "PW" in the end of the part number.

The option code "PR" is used to provide the guide rail with positioning pin holes.

When positioning pin holes are necessary on both the slide block/sub table and guide rail, please add the option code "PSR" or "PWR" as shown in Table H-17.

Table H-17 Option Code for Positioning Pin Hole

pin hole		slide block		
		PS	PW	none
guide rail	PR	PSR	PWR	PR
	none	PS	PW	none

### Positioning Pin Hole for Slide Block and Sub Table

It is useful when exacting reassembly positioning is required. In case of two blocks used, both blocks are processed.

When the code "PS" is added, the drilling is processed only on the mounting surface (slide block or sub table). When the code "PW" is specified for a BG with a top cover (except for BG15), the slide block and sub table are connected by the straight pins at the location where the "PS" option specifies on the slide block.

Note that NB does not supply straight pins for the "PS" option.

—With Top Cover—

※For some cases, a shallow counterbore of  $\phi 5$  will be machined at the hole area with "※" to remove a hardened layer.

### POSITIONING PIN HOLE FOR GUIDE RAIL

It is useful to use positioning pin holes on the guide rail when exacting reassembly positioning is required. After the insertion of the straight pins in the BG guide rail base, the pins might interfere with the slide block. In the positioning process, please consider the BG base thickness. The length of the pin in the BG base shall be shorter than the BG base thickness. Please make sure that the pins shall not interfere with the slide block. Table H-18 shows the pin length in the BG base. Note that NB does not supply straight pins for the guide rail. (Parallel pin type A is recommended.)
